Detailed Action

This Office Action is in response to Applicant's communication filed on 6/26/2007.

Claims 1-20 are pending in this application.

Applicant's election with traverse of Group 1, claims 1-3, 8 and 11-14 in the reply filed on 6/26/2007 is acknowledged. The traversal is on the ground(s) that the Office Action has not established that it would pose an undue burden to examine the full scope of the claims. This is not found persuasive because the claims of the various groups are divergent in subject matter and are classified separately. The requirement is still deemed proper and is therefore made FINAL.

Claims 4-7, 9-10 and 15-20 are withdrawn from consideration, being drawn to the non-elected subject matter.

IDS

The information disclosure statement filed on 10/12/2004 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Objections: Content of Specification

- (b) Cross-References to Related Applications: See 37 CFR 1.78 and MPEP § 201.11.

Content of specification is missing cross-references to related applications.

Appropriate correction is required.

Claim Rejections – 35 USC 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-3, 8 and 11-14 are rejected under 35 U.S.C. 102(a) as being anticipated by Bass et al. (Pharmacology, Biochemistry & Behavior, 74 (2002) 31-40).

The instant claims are drawn to compounds with the following broad structure, with the limitations from claim 1.

Art Unit: 1621

Bass et al. teaches the following compound, which corresponds to Applicant's elected species. Therefore these claims are fully met.

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Claim Rejections - 35 USC 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tilley et al. (US 4,916,145).

The instant claims are drawn to compounds with the following broad structure, with the limitations from claim 1.

Tilley et al. teaches compounds with the structural limitations shown in column 1, lines 7-55. Furthermore, the art exemplifies an adjacent homolog of Applicant's genus, found in columns 41 and 42, example 46.

Tilley et al. is deficient in the sense that it does not exemplify Applicant's particular species.

However, it would be prima facie obvious to one of ordinary skill in the art at the time of the invention, to determine the appropriate chemical constituents from Tilley et al.'s genus structural limitations, to arrive at Applicant's compounds. One of ordinary skill in the art would have been motivated to make the adjacent homologs of the compounds disclosed in Tilley et al., with the reasonable expectation that the compounds would be useful as Platelet Activating Factor antagonists. Absent any showing of unusual and/or unexpected results over Applicant's particular synthetic

route, the art obtains the same terphenyl structure. The expected result would be the efficient production of terphenyl derivatives for the pharmaceutical industry.
